*"In the great temple of Benares ... rests a brass plate in which are fixed 3 diamond needles, each a cubit high and as thick as the body of a bee. On one of these needles, at the creation, God placed 64 disks of pure gold, the largest disk resting on the brass plate, and the others getting smaller and smaller up to the top one. This is the Tower of Brahma ... When the 64 disks shall have been transferred from the needle on which at the creation God placed them, to one of the other needles, tower, temple, and Brahmins alike will crumble into dust, and with a thunderclap the world will vanish!"*

# Calgary Drop-In Centre's Donor Information System

## Abstract

In the spring of 2016, the director of finance and administration for the Calgary Drop-In Centre was frustrated with the organization's legacy donor and volunteer information system. The director was concerned that issues with the organization's information system could impact its ability to maintain positive relationships with existing donors and supporters-ultimately, that it could have an impact on the agency's ability to serve the community. He was contemplating three options to solve this problem:

- build a new in-house system to replace the current Microsoft Access database;
- purchase customer relationship management software specifically designed for fundraising and relationship management – and install this on servers in the offices; or
- adopt a cloud-based fundraising solution, where the organization's data is stored on a secure, shared platform administered by the vendor.
